Cover: The USGS bottomhole temperature correction method was compared to other prominent empirical methods available in the literature. The effect of depth variation was studied for each method. Results indicate the USGS method is most applicable to the onshore Gulf Coast because it is calibrated using data from this region. For more information, please see Burke et al. paper herein.
CONTENTS

Depositional and Diagenetic Controls on Reservoir Quality in Deepwater Sandstones in the Lower Wilcox Group, Lavaca Canyon Complex in the Hallettsville Embayment, Southeastern Texas Gulf Coast ................................................................................................................... 1

William A. Ambrose and Shirley P. Dutton

Stratigraphic Architecture, Depositional Systems, and Lithofacies of the Mississippian Upper Barnett Two Finger Sand Interval, Midland Basin, Texas ......................................................... 21

Justin V. Mauck, Robert G. Loucks, and David J. Entzminger

Preservation of Reservoir Quality by Chlorite Coats in Deep Tuscaloosa Sandstones, Central Louisiana, U.S.A. ............................................................................................................................ 46

Shirley P. Dutton, Marilyn E. Hutton, William A. Ambrose, A. Taylor Childers, and Robert G. Loucks

Eagle Ford–A Depositional Setting and Processes in Southwestern Texas: An Example of Deeper-Water, Below-Storm-Wave-Base Carbonate Sedimentation on a Drowned Shelf ..................................................................................................................................... 59

Robert G. Loucks

Characterization, Origin, and Significance of Carbonate Pulverulite: A Weathering Product of Microporous Strata ...................................................................................................................... 79

Robert G. Loucks, Zsófia Poros, and Hans G. Machel

Methodology for Correcting Bottomhole Temperatures Acquired from Wireline Logging Measurements in the Onshore U.S. Gulf of Mexico Basin to Characterize the Thermal Regime of Total Petroleum Systems ...................................................................................................................... 93

Lauri A. Burke, Ofori N. Pearson, Scott A. Kinney, and Janet K. Pitman

Geologic Mapping of Upper Glen Rose Unit 3 (Lower Cretaceous) in the Onion Creek Basin, Western Hays County, Texas: Implications for Recharge to the Trinity Aquifer .................................................................................................................................. 107

Jeffery A. Watson, Alex S. Broun, Brian B. Hunt, and Douglas A. Wierman

Volume Fractions of Lithologic Units Deposited per Geologic Epoch in the Cenozoic, Keathley Canyon and Walker Ridge, Deepwater Gulf of Mexico: Part 1—Sand, Shale, and Siltstone ........................................................................................................... 121

Sharon Cornelius and Peter A. Emmet

Volume Fractions of Lithologic Units Deposited per Geologic Epoch in the Cenozoic, Keathley Canyon and Walker Ridge, Deepwater Gulf of Mexico: Part 2—Limestone and Marl .................................................................................................................................... 151

Sharon Cornelius and Peter A. Emmet
GCAGS Executive Committee (2017–2018)
President ...................................................................................... Ralph Richardson
Vice President ............................................................................. Deborah Sacrey
General Chairman ....................................................................... Alan Brittain
Treasurer ........................................................................................ Daniel Sutton
Past President ............................................................................... Thomas Ewing
Executive Director ........................................................................ Kate Kipper
